**Rely on Eaton Automatic Transfer Switches for Reliable Emergency Power**

Eaton's full line of UL1008 automatic transfer switches for emergency and standby power provide industry-leading performance, reliability and versatility across critical power applications.

Now, 1600 ampere contactor-based switches are available with robust monitoring, reporting and transfer control operation.

Engineered to meet the emergency power needs of commercial, industrial, and mission critical applications, the new contactor based transfer switches will provide additional functionality - in-phase transition with a default to delayed transition from 40 – 1600A. This enables the switch to handle all types of inductive loads. Further, the wall-mount version enables:

- Transfer of in-phase with default to time-delay neutral or time-delay neutral only transfer
- Flexibility to change transfer mode in the field
- Optional load-shed feature
